Location
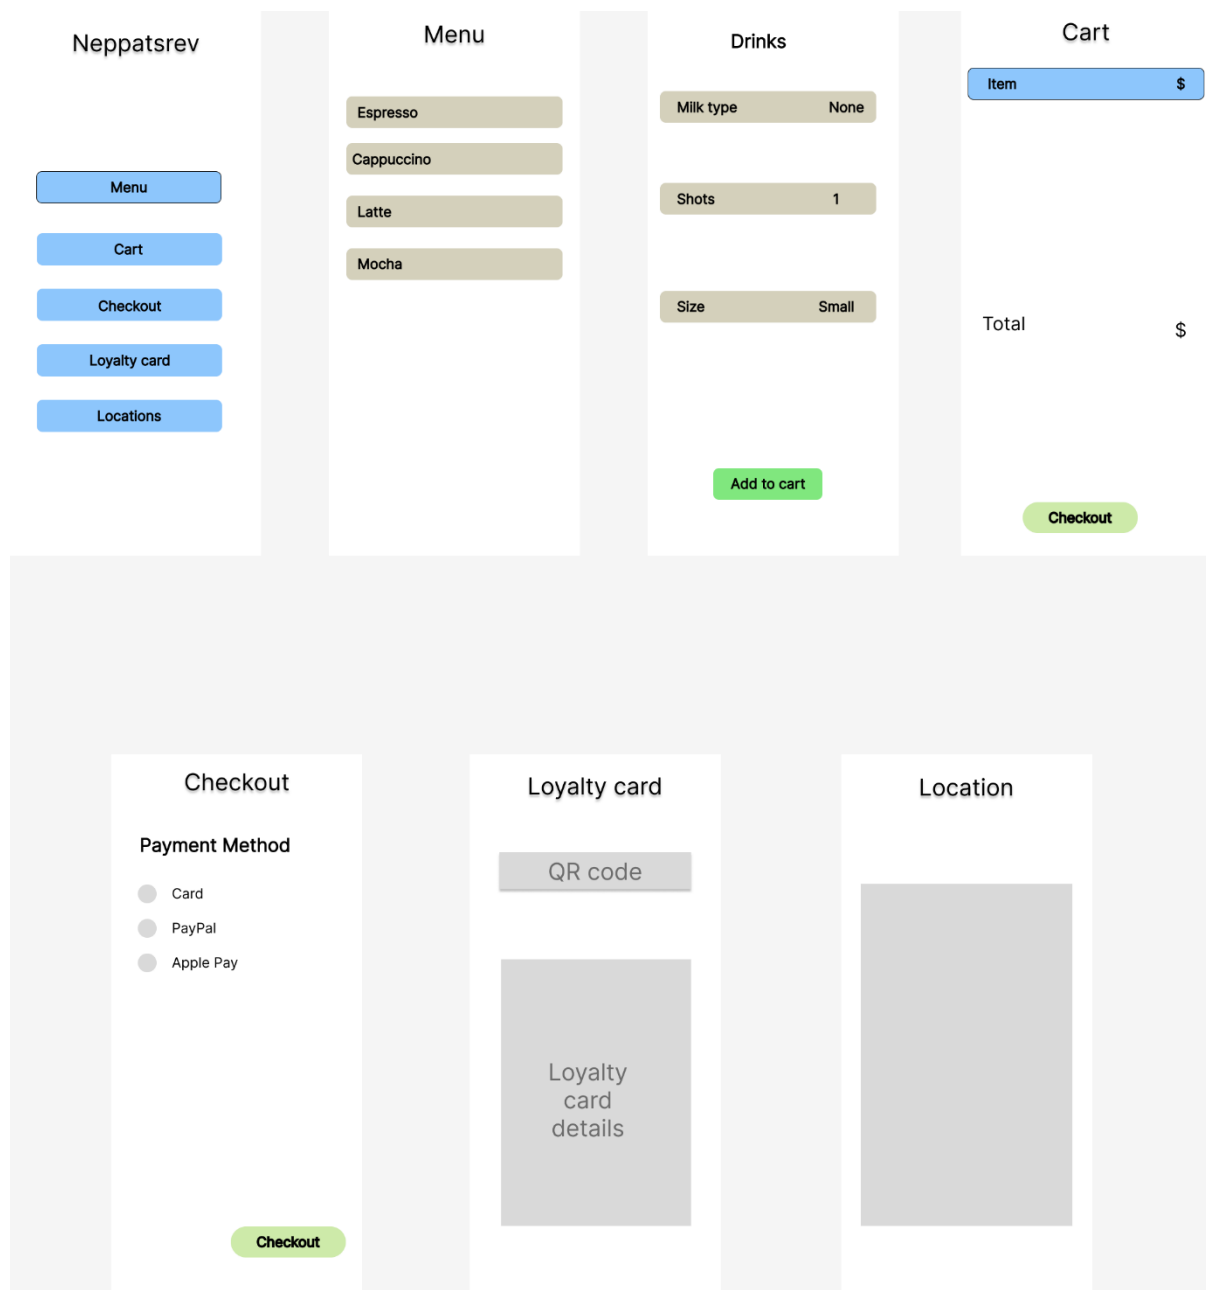

Navigation:

I used NavigationView along with NavigationLink for navigation between views.

Home View to Menu View : NavigationLink from Home View.

Home to Drinks View : NavigationLink from Menu View.

Home to Loyalty Card View : NavigationLink from Menu View.

Home to location View : NavigationLink from Menu View.

Home View to cart View : NavigationLink from home Card View.

Menu View to Drinks View : NavigationLink from Menu View.

Drinks View to cart View : NavigationLink from drinks View.

I chose NavigationLink because it provides a standard way to navigate between views in SwiftUI, and it's easy to implement.
